

## Concept Of Before and After

Knowing the location of thing or person is important in math. We have begun by learning the concepts of before and after using games, play activities and fun interactions. The class of Jr .Kg. conducted the activity on the concept of '**Before and After**' on 12<sup>th</sup> August, 2018. In this activity, the teachers took students to the garden and library and taught the concept of "Before and After" by using various objects like See-Saw, Slide-ladders, Merry-Go-Round. They were very happy by this activity.
