

Report on Science Day Celebration

While trying to answer a simple question on "Why the sky is blue?" Prof C V Raman, 86 years back, on February 28, 1928 discovered the concept of non-elastic scattering known as "Raman Effect". To **celebrate** this discovery and to create scientific awareness among the school children, and to popularize the benefits of scientific knowledge and practical appropriation National Science Day was celebrated at **Hanumant High School** on 28 February 2018. An informative speech on the significance of the day was delivered by Prerna mam. The atmosphere became electric and exciting when the students of grade IV and V displayed working models to support their experiment on various topics. The celebration cannot be complete without a Presentation , so to put more light on the importance of the day a PPT was explained by Sudha Mam, Jyoti Mam and Miral Mam. It was a small but significant initiative on the part for our students to put an effort to understand moral and ethical response to seek cooperation between science and human implementation of comfort in service.
