

ACTIVITY ON MORE AND LESS

How to count objects in number is challenging for small kids. To develop the counting skill of the students of SR.KG. class an activity on “MORE AND LESS” concept was conducted on 1st October 2018. Teachers arranged the objects like wooden shapes, wooden picture objects, water bottles and the objects used in the class. The students counted the things and learnt about more and less concepts. It was fun for all the students by counting the objects with learning.
