

ANIMAL ACTIVITY

Animals are found in many kinds. They inhabit different places, and live in different condition. Biodiversity is the term that describes the many different species sharing one habitat.

The students of Nursery learnt about some animals, their habitats and their babies in an activity conducted on 25th sep. 2018. The students were divided into three groups Water, Wild and Domestic animals. Each student from each group came forward and chose an animal of their respective group. It was a learn with fun activity.
