

SEED GERMINATION ACTIVITY

Seed germination is the process of growth in plants. Plants come from seeds. This happens when the seeds are planted in the ground which is called germination.

To learn more about the process of germination an activity was conducted in Senior Kg. class on 20th Sep. 2018. The students went to the school garden. The students dug the soil and sowed some seeds. They also watered the seeds. They made full germination process on their sheets in the class. The students enjoyed the activity in the garden area as well as in the class.
