

OUR EDUCATION SYSTEM

"EDUCATION IS THE GOLDEN KEY TO UNLOCK ALL THE DOORS OF OPPORTUNITIES."

If we compare our education system with the traditional one then we can say that it has completely changed. In ancient times, education was not considered that much important and especially girls were not permitted to go to school. But today, with the development in the technology, e-learning has also taken a major role to play. Students can learn anything, anywhere, anytime. Competition has also become very tough. Studies have become a bit complicated meaning stress has also disturbed the student's life. They don't get time from homeworks and projects. Worksheets and other assignments also don't let them free. The school bag is too heavy with the books that the student can't even carry it on his back. Parents force their children to study continuously and to score good marks. In this blind race, they just forget their child's health. There are too many books and there are various subjects to study. Instead, the number of books should be less but the knowledge required should be provided. The child gets confused about what to study and how much. This is one of the main reason for stress.

However just as a coin has two sides, similarly the modern education system along with disadvantages has so many other advantages and it is very useful. The students instead of doing hard work learn to do smart work. They are evaluated and assisted with both scholastic and well as co-scholastic activities (co-curricular activities) which are very helpful for their growth and development. Excluding the knowledge and content in the textbook, they also get knowledge useful for their practical life. They are explained the concepts using videos, powerpoint presentations, in the form of cartoons so the students remember and understand the concept in a better way. The projects help them to explore their knowledge on a subject or a topic. The CCE based syllabus is very helpful. The modern education system aims at keeping the child mentally as well as physically strong. It prepares the students in such a nice way that they all appear as strong competitors outside the school. Their basic G.K is also impoverished. Their speaking and listening skills and others like art and music skills are also get developed. Thus, we can say that our education system is the best but in some criterias, we can improve it.

"EDUCATION IS A POWERFUL WEAPON TO BREAK ALL THE KINDS OF DIFFICULTIES AND PROBLEMS."

"NO ONE CAN TAKE YOUR EDUCATION FROM YOU."

- CHARMI MEHTA, CLASS 10
